

## IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims:

1. (Currently Amended) A method of configuring a bid adjustment mechanism in an online auction, the method comprising:

(a) displaying a bid adjustment mechanism configuration interface including the bid adjustment mechanism that allows a bidder to specify an adjustment for a bid without entering an amount of the bid; [[and]]

(b) setting the bid adjustment mechanism to a bid adjustment value specified by the bidder using the configuration interface; and

(c) adjusting, such that when the bid adjustment mechanism is actuated, a bid is adjusted in the online auction by the bid adjustment value set in the configuration interface in the event that the bid adjustment mechanism is actuated.

2. (original) The method of claim 1, wherein the bid adjustment mechanism is a button on a graphical user interface displayed to the bidder.

3. (previously presented) The method of claim 1, wherein setting the bid adjustment mechanism further comprises selecting a bid adjustment type associated with the bid adjustment value, wherein the bid adjustment type corresponds to an absolute value or a percentage of a previous bidder.

4. (original) The method of claim 3, wherein the absolute value is measured in a currency.

5. (original) The method of claim 4, wherein the currency is U.S. dollars.

6. (Withdrawn) The method of claim 1, wherein the bid adjustment value corresponds to a bid rank.

7. (withdrawn) A method of configuring bid adjustment mechanisms in an online auction, wherein bids are comprised of at least two parameters, and each parameter may be adjusted using a different bid adjustment mechanism, the method comprising:

(a) displaying a bid adjustment mechanism configuration interface; and

(b) setting a bid adjustment value for each of the at least two bid parameters, such that when the bid adjustment mechanism for a given bid parameter is actuated, the given bid parameter is adjusted by the bid adjustment value set for the parameter based on input provided by a bidder using the configuration interface.

8. (withdrawn) The method of claim 7, wherein setting the bid adjustment value further comprises selecting, for each one of the at least two bid parameters, a bid adjustment type associated with the bid adjustment value set for said one bid parameter.

9. (withdrawn) The method of claim 7, wherein the at least two bid parameters include price and quantity.

10. (withdrawn) The method of claim 7, wherein the at least two bid parameters include discount rate and contract length.

11. (Currently Amended) A computer-implemented apparatus for configuring a bid adjustment component of an application for submitting bids to an electronic auction, comprising:

a user-interface that displays a bid adjustment mechanism allowing a bidder to specify an adjustment for a bid without entering an amount of the bid;

a processor, coupled to the user-interface that sets the bid adjustment mechanism to a bid adjustment value specified by the bidder;

wherein, upon actuation of the bid adjustment mechanism, a bid in the electronic auction is adjusted by the bid adjustment value.

12. (original) The apparatus of claim 11, wherein said bid adjustment component is selected from the group consisting of absolute value, percentage and rank.

13. (withdrawn) A computer-implemented apparatus for configuring at least two bid adjustment components of an application for submitting bids to an electronic auction, wherein each bid adjustment component is adjusted using a different bid adjustment mechanism comprising:

A user-interface that displays bid adjustment mechanism configuration options for each bid adjustment component to a bidder;

A processor, coupled to the user-interface that sets a bid adjustment value for the bid adjustment mechanism for each bid adjustment component based on input provided by a bidder;

Wherein, upon actuation of the bids adjustment mechanism for a bid adjustment component, a bid is adjusted by the bid adjustment value for said bid adjustment component.

14. (withdrawn) The apparatus of claim 13, wherein the at least two bid adjustment components include price and quantity.

15. (previously presented) A computer readable medium comprising executable instructions which when executed on a processing system cause said processing system to perform a method of configuring a bid adjustment mechanism in an online auction, the method comprising:

(a) displaying a bid adjustment mechanism configuration interface including the bid adjustment mechanism that allows a bidder to specify an adjustment for a bid without entering an amount of the bid; [[and]]

(b) setting the bid adjustment mechanism to a bid adjustment value specified by the bidder using the configuration interface; and

(c) adjusting, such that when the bid adjustment mechanism is actuated, a bid is adjusted in the online auction by the bid adjustment value set in the configuration interface in the event that the bid adjustment mechanism is actuated.

16. (withdrawn) A computer readable medium comprising executable instructions which when executed on a processing system cause said processing system to perform a method of configuring a bid adjustment mechanism in an online auction, the method comprising:

(a) displaying a bid adjustment mechanism configuration interface; and

(b) setting a bid adjustment value for each of the at least two bid parameters, such that when the bid adjustment mechanism for a given bid parameter is actuated the given bid

parameter is adjusted by the bid adjustment value set for the parameter based on input provided by a bidder using the configuration interface.
